

Minnesota – Rural Site

Total living turf cover [Total Cover (TC)] for Fall 2017 and Spring 2018 and percent total cover change from 2017 to 2018 (2017-2018 % TC Change). When treatment F tests were significant ($p \leq 0.05$), the Fisher's Protected Least Significant Difference Test ($\alpha = 0.05$) was used to separate means. For % TC Change (when significant), **the most positive value within a column is shaded blue**, while **the most negative value within a column is shaded red**. Remaining cells are shaded in a blue-purple-red gradient with **zero shaded purple**. Negative values indicate a reduction in turf coverage of desired species, whereas a positive value means the turf coverage of the plot increased.

This site was seeded 8/24/2017. The soil type was Cordova loam with 3.4% organic matter. This site was damaged due to a construction crane and had to be re-seeded in fall 2017. Plots were watered with a water truck during establishment.

Turfgrass Entry	Species ¹	Fall 2017	Spring 2018	2017-2018
